Junior Fellow in Artificial Intelligence

Summary

I am a Junior Fellow in AI at Université Côte d'Azur, member of the Wimmics team. Previously, I was a researcher in Artificial Intelligence in the industry, with Orange, in Belfort, France. I received my Doctoral degree in Computer Science from Université de Lorraine, Nancy, France, in 2020.

My research focuses on the different steps of the knowledge graph lifecycle (construction, knowledge discovery, matching, refinement, mining), and their usage in various downstream applications (e.g., recommender systems, explainable AI). I am particularly interested in interactions between domain knowledge represented in knowledge graphs and different forms of reasoning in a neurosymbolic perspective (e.g., benefits of injecting domain knowledge in Machine Learning models, analogical reasoning). My work involves both theoretical and applied perspectives, often in interdisciplinary settings (e.g., biomedical, educational domains). I was the Principal Investigator of the ECLADATTA French national project and I am an Investigator of the AT2TA French national project (both funded by the French National Research Agency).

Current positions

Since Sept. 2023 **Junior Fellow in AI – Université Côte d'Azur – Sophia Antipolis, France**

Research within the Wimmics team

Teaching within EFELIA Côte d'Azur (~ 128h of teaching)

Education

2016 – 2020 **PhD in Computer Science – Université de Lorraine – Nancy, France**

[Matching and mining in knowledge graphs of the Web of data](#)

[Applications in pharmacogenomics](#)

- Knowledge matching: identification of identical, more specific, or related knowledge units
 - Rule-based approach with ontology-based preorders (ICCS 2020 [8])
 - Graph embedding and clustering-based approach with Graph Convolutional Networks (DL4KG@ESWC 2019 [2], Semantic Web Journal [16])
- Knowledge mining
 - Scalable mining of path patterns (ALGOS 2020 [7])
 - Extension of Formal Concept Analysis to refine ontology class hierarchies (ISMIS 2017 [9], BDA 2017 (poster) [27], FCA4AI@IJCAI-ECAI 2018 [18])
- Explainable AI
 - Interpretable features and models to reproduce expert classifications of drugs causing or not side effects (post-hoc explanations) (BMC Medical Informatics and Decision Making [3])
- Throughout all works: importance of domain knowledge represented in ontologies
- Applications on real data in pharmacogenomics: more than 50k n -ary relationships linking sets of drugs, genetic factors, and phenotypes, from heterogeneous sources (different vocabularies, levels of granularity)
- Construction and maintenance of PGxLOD, a knowledge graph about pharmacogenomics (BMC Bioinformatics [4])
- Emphasis on Open Science
 - Codes on GitHub
 - Public knowledge graph and ontology
 - Deployability and reproducibility with Docker containers

Keywords: Ontology, n -ary Tuple, Preorder, Graph Embedding, Path Pattern, Formal Concept Analysis

Within the PractiKPharma project funded by the French National Research Agency (ANR)

Directeurs de thèse :

- Amedeo Napoli (Senior Researcher, CNRS, LORIA)
- Adrien Coulet (Associate Professor, Université de Lorraine, LORIA)

Thesis written and defended in English on December 16th, 2020 with the following committee:

Chair	Marianne Clausel	Full Professor, Université de Lorraine, IECL
Reviewers	Claudia d'Amato	Associate Professor, University of Bari
	Fabien Gandon	Senior Researcher, Inria Sophia Antipolis - Méditerranée
Examiners	Céline Rouveirol	Full Professor, Université Sorbonne Paris Nord
	Matthias Samwald	Associate Professor, Medical University of Vienna

2012 – 2015 **Engineering Diploma (M.Sc. equivalent) – TELECOM Nancy – Nancy, France**

Major in Software engineering – Valedictorian

[Engineering master thesis](#)

3D visualization applied to aircraft MRO.

What purposes? What technologies? What developments?

Based on my internship at Swiss AviationSoftware – Graded 17/20

- 2010 – 2012 **Integrated preparatory class – ECE – Paris, France**
Valedictorian
- 2010 **Scientific Baccalaureate – Lycée Stanislas – Villers-Lès-Nancy, France**
Major in Mathematics – with distinction

Previous professional positions

- 2020 – 2023 **Researcher – Orange – Belfort, France**
Permanent contract
Knowledge Engineering and Machine Learning for knowledge graph construction and refinement
- 2022 – 2023 **Temporary lecturer – TELECOM Nancy – Nancy, France**
8-hour class about knowledge-based systems
- 2016 – 2020 **PhD student in Computer Science – LORIA / Université de Lorraine – Nancy, France**
- 2019 – 2020 Temporary teaching and research fellow (ATER) – IDMC
~ 192h of teaching
- 2016 – 2019 Teaching assistant – TELECOM Nancy
~ 64h of teaching per year
- 2015 – 2016 **Temporary lecturer – TELECOM Nancy – Nancy, France**
~14h of teaching
- 2015 – 2016 **Software developer – Swiss AviationSoftware – R&D department – Basel, Switzerland**
6-month internship; followed by a permanent contract
Development of a UI component to display animated 3D models from aircraft documentation
State of the art, software architecture, test driven development, and continuous integration
- 2010 – 2015 **Private teacher – Student tutoring associations**
Private lessons or groups of 10 to 30 students
Mathematics, programming, compiler theory, signal processing
- 2014 **Student Entrepreneurship Department (Peel) – Université de Lorraine – Nancy, France**
3-month internship; entrepreneurial project
Technical development (image processing, video mapping), training (financing, legal, communication), client and shareholder meetings, market analysis
- 2013 **Caisse d'Epargne – Human Resources Information System – Metz, France**
3-month fixed-term contract
Development of a software analyzing HR databases to automatically produce organization charts (divisions, positions, people)
Software architecture, technical development, user support and training
- 2012 **Caisse d'Epargne – Human Resources Information System – Metz, France**
9-week internship
Agile development of a software for career management within a 3-person team

Awards

- **Best paper award [5]** at the 23rd International Conference on Knowledge Engineering and Knowledge Management (EKAW 2022)
- **Best paper award [24]** at the French Conference IC ("Ingénierie des connaissances" - Knowledge Engineering) 2022 co-located with PFIA 2022
- **Best thesis award [30]** at French Conference EGC 2022, awarded by the French Association EGC ("Extraction et Gestion des Connaissances" - Knowledge Extraction and Engineering)

- **1st prize [14]** (Accuracy Track) at the Semantic Web Challenge on Tabular Data to Knowledge Graph Matching 2021, co-located with the 20th International Semantic Web Conference (ISWC 2021)
- **3rd prize [15]** at the Semantic Web Challenge on Tabular Data to Knowledge Graph Matching 2020, co-located with the 19th International Semantic Web Conference (ISWC 2020)

Funding of research projects

ECLADATTA (2023 – 2026)	<p>Principal Investigator (2023); Associate Member (2023 – 2026) French National Research Agency (ANR) Generic Call 2022</p> <p>I set up and led during 6 months this 42-month project which aims at proposing a joint pipeline for extracting and reconciling knowledge from texts, tables, and knowledge graphs. After leaving my position at Orange, I became an associated member.</p> <p>Funding for my institution (Orange): 196k€ – Total project funding: 601k€ Partners: EURECOM, IRIT, Orange</p>
AT2TA (2023 – 2026)	<p>Investigator French National Research Agency (ANR) Generic Call 2022</p> <p>This 42-month project aims at exploring the theory and applications of analogical reasoning. I am co-leading the work package on use cases and applications. I am leading the task studying interactions between knowledge management and analogical reasoning.</p> <p>Funding for my institution (Orange): 30k€ – Total project funding: 669k€ Partners: LORIA (PI), IHU Imagine, IRIT, Inria, Infologic, Orange</p>

Student supervision

PhD students (2)

- Mar. 2023 – Mar. 2026 **Lucas Jarnac – Orange / Université de Lorraine**
 Reconciliation of uncertain knowledge from heterogeneous sources for knowledge graph refinement
 Co-supervised with Miguel Couceiro
 Publication: [22]
- Sept. 2021 – Sept. 2024 **Nicolas Hubert – Université de Lorraine**
 Even though I am not his supervisor, I have the chance of working with Nicolas and his supervisors (Armelle Brun and Davy Monticolo) on his thesis about knowledge graphs and explainable recommender systems for education
 Publications: [5, 11]

Interns and student projects (12)

- Jun. 2023 – Aug. 2023 **Adrien Chassaing-Monjou, M.Sc. Year 1 (Bac+4)**
 3-month internship
 Exploring analogical proportions to align Knowledge Graphs
 Co-supervised with Miguel Couceiro and Esteban Marquer
- Oct. 2022 – Jun. 2023 **Omar Abedelkader, Juba Ait-Abdelmalek, Ekaterina Kozachenko, M.Sc. Year 1 (Bac+4)**
 8-month research project
 Exploring analogies for automatic semantic annotation taking into account context
 Co-supervised with Stergos Afantenos, Miguel Couceiro, and Esteban Marquer

Oct. 2022 – Jun. 2023	Adrien Chassaing-Monjou, Chadi Hani, M.Sc. Year 1 (Bac+4) 8-month research project Exploring analogical proportions between and within Knowledge Graphs Co-supervised with Miguel Couceiro and Esteban Marquer
Sept. 2022 – Feb. 2023	Li-Fan Zhao, M.Sc. Year 2 (Bac+5) 5-month research project Knowledge extraction from tabular data in Electronic Health Records Co-supervised with Adrien Coulet and Bastien Rance
Mar. 2022 – Sept. 2022	Lucas Jarnac, M.Sc. Year 2 (Bac+5) 6-month internship Creation of an Enterprise Knowledge Graph: bootstrapping and knowledge reconciliation Publication: [10]
Jun. 2019 – Aug. 2019	Melvin Moreau, B.Sc. Year 2 (IUT Bac+2) 2-month internship Updating PGxLOD with the newest versions of the integrated Linked Open Data sets Co-supervised with Amedeo Napoli
Jan. 2018 – May 2018	Benoît Frapiccini, Gabi Portelli, M.Sc. Year 1 (Bac+4) 5-month research project Extracting drug side effects from clinical annotations of PharmGKB to refine PGxLOD Co-supervised with Adrien Coulet
Jun. 2017 – Aug. 2017	Graziella Husson, M.Sc. Year 1 (Bac+4) 3-month internship Refining PGxLOD (integrating Linked Open Data sets, transforming PharmGKB data into RDF) Co-supervised with Adrien Coulet Publication: [4]

Publications

6 selected publications

- **Pierre Monnin**, Chedy Raïssi, Amedeo Napoli, and Adrien Coulet. “Discovering alignment relations with Graph Convolutional Networks: A biomedical case study”. In: *Semantic Web* 13.3 (2022), pp. 379–398. DOI: 10.3233/SW-210452

This journal paper presents a neuro-symbolic matching approach based on graph embeddings (Graph Convolutional Networks and the Soft Nearest Neighbor Loss) and clustering. We measured the improvements in matching results when considering different inference rules associated with domain knowledge (e.g., class hierarchy, inverse of predicates). We also observed that distances in the embedding space are coherent with the “strength” of the different preexisting alignment relations (e.g., smaller distances for equivalences). Since the model was agnostic to these different alignment types, this corresponds to the emergence of a semantics in the embedding space. These observations open interesting perspectives: (i) they advocate for the further integration of domain knowledge within embedding models, and (ii) they let us consider clustering and distances in the embedding space as a means to suggest alignment relations. This second perspective is in line with current neuro-symbolic works that aim at associating semantics to latent representation spaces of embedding models.

In: *BMC Medical Informatics and Decision Making* 21.1 (2021), p. 171. DOI: 10.1186/s12911-021-01518-6

This journal paper proposes to mine features from knowledge graphs and use them in white-box models (here, decision trees) to generate post-hoc explanations for binary classifications representing human knowledge. Here, we mine PGxLOD and reproduce expert classifications of drugs causing or not two types of side effects. We showed that features from knowledge graphs and decision trees allow to reproduce expert classifications with a fair fidelity. Additionally, a manual evaluation by 3 experts of the most discriminative features showed that they may provide molecular explanations to the occurrence of drug side effects.

In: *BMC Bioinformatics* 20-S.4 (2019), 139:1–139:16. DOI: 10.1186/s12859-019-2693-9

This journal paper presents the construction and usage of the PGxLOD knowledge graph that integrates pharmacogenomic knowledge from the PharmGKB specialized database, and the biomedical literature (automatic relation extraction from text). The paper also introduces a first rule-based approach to match these n -ary complex knowledge units and measure overlaps between their sources. On the application side, this knowledge graph is a major resource as it offers a consolidated view of the available knowledge in the domain of pharmacogenomics, and allows to measure the complementarity between original knowledge sources. On the computer

science side, this graph is an interesting data set for matching and mining approaches because of the specific characteristics of pharmacogenomic knowledge units: their heterogeneous and complex representation (n -ary relations), and their number (50 000 relations).

PGxLOD has become one main output of the French national research project PractiKPharma. It was used to represent knowledge units extracted during the project, and served as the experimental setting for matching and mining approaches. This article and associated artifacts illustrate my commitment to develop both necessary approaches and data sets to advance the state of the art, and to make them publicly available in an Open Science perspective.

- Nicolas Hubert, **Pierre Monnin**, Armelle Brun, and Davy Monticolo. “New Strategies for Learning Knowledge Graph Embeddings: The Recommendation Case”. In: *Knowledge Engineering and Knowledge Management - 23rd International Conference, EKAW 2022, Bolzano, Italy, September 26-29, 2022, Proceedings*. Vol. 13514. Lecture Notes in Computer Science. Springer, 2022, pp. 66–80. DOI: 10.1007/978-3-031-17105-5_5

This conference paper investigates whether graph embedding approaches for link prediction can be used for recommendation tasks. Specifically, we view the recommendation task as predicting links with a specific relation. Two specialized training strategies are proposed and evaluated. For each model, a baseline training phase is performed considering the whole knowledge graph, followed by a specialized training phase only considering triples with the relation of interest. The two proposed strategies differ on the generation of negative triples during this specialized phase. One strategy generates random negative triples whereas the other constrains negatives with the types of the original entities in the positive triple. To evaluate models, beside traditional link prediction metrics, we introduce $Sem@K$, a new metric that captures the ability of models to predict/recommend entities that are of the expected type w.r.t. domain and range of relations. This metric constitutes an original contribution in a neuro-symbolic perspective since it considers domain knowledge during the evaluation of models. This, in turn, allows to precisely qualify the nature of the models errors.

This paper won the best paper award at the EKAW 2022 international conference.

- **Pierre Monnin**, Miguel Couceiro, Amedeo Napoli, and Adrien Coulet. “Knowledge-Based Matching of n -ary Tuples”. In: *Ontologies and Concepts in Mind and Machine - 25th International Conference on Conceptual Structures, ICCS 2020, Bolzano, Italy, September 18-20, 2020, Proceedings*. Vol. 12277. Lecture Notes in Computer Science. Springer, 2020, pp. 48–56. DOI: 10.1007/978-3-030-57855-8_4

This conference paper presents a symbolic approach for the structure-based matching of instances. We enrich this task by not only detecting identical instances, but also more specific or weakly related ones. The proposed mathematical formalism is highly generic and adaptable. It considers n -ary tuples (without constraints on the arity) whose arguments are sets of individuals. The matching is performed with 5 rules concluding on 5 different relatedness levels. Domain knowledge represented within ontologies is leveraged in two preorders to compare arguments while facing their heterogeneous representations.

- Viet-Phi Huynh, Jixiong Liu, Yoan Chabot, Frédéric Deuzé, Thomas Labbé, **Pierre Monnin**, and Raphaël Troncy. “DAGOBAB: Table and Graph Contexts For Efficient Semantic Annotation Of Tabular Data”. In: *Proceedings of the Semantic Web Challenge on Tabular Data to Knowledge Graph Matching co-located with the 20th International Semantic Web Conference (ISWC 2021), Virtual conference, October 27, 2021*. Vol. 3103. CEUR Workshop Proceedings. CEUR-WS.org, 2021, pp. 19–31. URL: <http://ceur-ws.org/Vol-3103/paper2.pdf>

This workshop paper presents the latest version of the DAGOBAB system developed at Orange. DAGOBAB semantically annotates tabular data (e.g., cells, columns) with elements of a knowledge graph (e.g., entities, classes, properties). Annotations allow to semantically interpret tabular data content and can support various applications, e.g., data set indexing and recommendation, knowledge graph or table completion.

This system won the 1st prize in accuracy during the international challenge SemTab 2021 co-located with ISWC 2021. SemTab is the central venue of the Semantic Table Interpretation community.

Invited talks

International workshops

- **Pierre Monnin**. Discovering alignment relations with Graph Convolutional Networks: a biomedical case study. ROCED workshop at KGC 2022, May 2, 2022, Remote.

National conferences

- **Pierre Monnin**. Matching and mining in knowledge graphs of the Web of data - Applications in pharmacogenomics. EGC 2022 (best thesis award), January 24-28, 2022, Blois, France.

National workshops

- **Pierre Monnin**. Matching and mining in knowledge graphs of the Web of data - Applications in pharmacogenomics. DECADE workshop at PFIA 2022, June 28, 2022, Saint-Etienne, France.
- Yoan Chabot, **Pierre Monnin**. DAGOBAB : Activités de recherche Orange autour de l'annotation sémantique de données tabulaires. TextMine'21 workshop at EGC 2021, January 26, 2021, Montpellier, France, Remote.

Seminars, symposiums, and junior conferences

- **Pierre Monnin**. Knowledge graph construction, refinement, and applications, with a neuro-symbolic perspective. GT MHyIA meeting, March 29, 2023, Lens, France.
- **Pierre Monnin**. Knowledge graph construction, refinement, and applications, with a neuro-symbolic perspective. WIMMICS seminar, March 23, 2023, Sophia-Antipolis, France.
- **Pierre Monnin**. Knowledge graphs: construction, matching, and applications. CRIL seminar, January 12, 2023, Lens, France.
- **Pierre Monnin**. Knowledge graphs: construction, matching, and mining. 7th Junior Conference on Data Science and Engineering (JDSE 2022), September 15, 2022, Palaiseau, France.
- **Pierre Monnin**. Matching and mining in knowledge graphs of the Web of data - Applications in pharmacogenomics. 4th GdR MaDICS symposium, July 11, 2022, Lyon, France.
- **Pierre Monnin**. DAGOBAB - An End-to-End Context-Free Semantic Annotation System for Tabular Data. MALOTEC seminar, LORIA, February 4, 2021, Nancy, France, Remote.

Non-academic talks

- **Pierre Monnin**. Knowledge graphs: construction, refinement, and applications, with a neuro-symbolic perspective. Language & Cognition seminar, IDMC, Université de Lorraine, February 1, 2023, Nancy, France (~30 people).
- Mathieu d'Aquin, Miguel Couceiro, **Pierre Monnin**. From machine learning to knowledge and back: A (de)tour over reasoning, analogies and knowledge graphs. Panel discussion. Cognitive Science and NLP forum of IDMC, Université de Lorraine, November 23, 2022, Nancy, France (~30 people).
- **Pierre Monnin**. Presentation of my career. TELECOM Nancy career day, June 9, 2022, Nancy, France (~75 people).
- **Pierre Monnin**. Valedictorian speech. TELECOM Nancy graduation ceremony, November 28, 2015, Nancy, France (~300 people).

Teaching

Classes with ^(EN) were taught in English. Other classes were taught in French.

Summary

Year	Class	Level	Lecture	Tutorial	Practical	Resp.
2022 – 2023	Knowledge-based systems	M.Sc. Year 2	4	4		×
2019 – 2020	Introduction to GNU/Linux and Git ^(EN)	M.Sc. Year 2		4		
	Ontologies ^(EN)	M.Sc. Year 2		6		
	Algorithms and programming	M.Sc. Year 1		15		
	Semantic Web ^(EN)	M.Sc. Year 1		15		
	Computability and Complexity ^(EN)	M.Sc. Year 1		10		
	Computational Complexity	B.Sc. Year 3	15	15		×
	Advanced Java Programming	B.Sc. Year 3		20		
	Java Programming	B.Sc. Year 2		20		
	Web Programming	B.Sc. Year 1		14		
	Algorithmics	B.Sc. Year 1		22		
	Tools and Digital Culture	B.Sc. Year 1		20		
2018 – 2019	Artificial Intelligence	M.Sc. Year 2		14	2	
	Knowledge-Based Systems	M.Sc. Year 2	16	16		×
	NoSQL Databases	M.Sc. Year 2			20	
	Compiler Implementation Project	M.Sc. Year 1			14	
2017 – 2018	Artificial Intelligence	M.Sc. Year 2	2	14	2	
	Knowledge-Based Systems	M.Sc. Year 2	16	16		×
	Compiler Implementation Project	M.Sc. Year 1			14	
2016 – 2017	Theory of Compilation	M.Sc. Year 1		20		
	Compiler Implementation Project	M.Sc. Year 1			14	
	Computer Science Basics	B.Sc. Year 3		18	16	
2015 – 2016	Compiler Implementation Project	M.Sc. Year 1			14	
Total			53h	263h	96h	

A × in column “Responsibilities” (Resp.) means that I was in charge of the class (scheduling sessions, preparing subjects and handouts for lectures, tutorials, practicals, exams, and projects, coordination with other teachers, participation in examination boards).

Class descriptions

2022 – 2023 **Temporary lecturer – TELECOM Nancy – Nancy, France**

[Knowledge-based systems](#)

Semantic Web (RDF, ontologies, OWL reasoning, SPARQL)

2019 – 2020 **Temporary teaching and research fellow – IDMC – Nancy, France**

[Introduction to GNU/Linux and Git^{\(EN\)}](#)

Basics of Linux and Git commands

[Ontologies^{\(EN\)}](#)

Description Logics, SPARQL

[Algorithms and Programming](#)

Introduction to programming in Python (functional and object-oriented programming)

[Semantic Web^{\(EN\)}](#)

First-order logic, Description Logics, Formal Concept Analysis, itemsets, association rules, Knowledge Graphs, Semantic Web (RDF, SPARQL) and applications

[Computability and Complexity^{\(EN\)}](#)

Turing machines, uncomputability, undecidability, complexity (e.g., big O notation)

[Computational Complexity](#)

Best, worst, and average case complexity, sorting algorithms, recursion, de-recursion, randomized algorithms, greedy algorithms, dynamic programming, backtracking, data structures (stacks, queues, heaps, graphs)

[Advanced Java Programming](#)

Advanced concepts of the Java language (collections, threads, User Interface)

[Java Programming](#)

Basic concepts of the Java language and Object Oriented Programming

[Web Programming](#)

HTML, CSS, and an introduction to JavaScript

[Algorithmics](#)

Introduction to algorithms (variables, assignments, conditions, loops, subalgorithms)

[Tools and Digital Culture](#)

Proficient use of Word, Excel, and Internet Research

2016 – 2019 **Teaching assistant – TELECOM Nancy – Nancy, France**

[Artificial Intelligence](#)

Search algorithms (e.g., A*, alpha-beta pruning), genetic algorithms, constraint satisfaction problems, Markov decision processes, supervised and unsupervised learning (e.g., decision trees, neural networks, backpropagation algorithm, multilayer perceptron, K-means, Kohonen map)

[Knowledge-Based Systems](#)

Semantic Web (RDF, ontologies, OWL, SPARQL), Prolog

[NoSQL Databases](#)

MongoDB, Elasticsearch, Redis, HBase, Neo4J

[Theory of Compilation](#)

LR(0), SLR(1), LR(1) and LALR(1) parsers, Symbol Tables, Abstract Syntax Trees, assembly code generation

[Compiler Implementation Project](#)

Implementation of a compiler with ANTLR, from grammar definition to assembly code generation

[Computer Science Basics](#)

Sorting algorithms, complexity, recursivity, back-tracking, Hoare logic

2015 – 2016 **Temporary lecturer – TELECOM Nancy – Nancy, France**

[Compiler Implementation Project](#)

Implementation of a compiler with ANTLR, from grammar definition to assembly code generation
